<u>Requirements Document</u>

Goal: To create an extension that will allow for better organization of web content between team members.

- The system's general design will be fluid and easy to use
  - There will be simple tabs and buttons only.
  - The extension popup will be small as to not intrude on the user but be large enough to view and interact with.

- The system will have the ability to create groups.
  - These groups can be for business projects, school classes, or for public use.
  - The admin will be able to edit members, which includes changing permissions of the members.

- The system will be able to efficiently add and organize content.
  - Adding content will be very easy and simple to do (a few clicks or less).
  - Each group will be able to add folders in their group.
  - Removing and moving content will not be made a hassle upon the user.

- The system will be able to notify members
  - Each time some new content is added there will be a notification (through chrome)

- The system shall have a report half-way through development.
  - Development should reflect some of the basic requirements that are set above.

- The system will be able to show a demo by mid-May with the expectation that it will not be available until the end of Q4 this year.
  - The demo will be functional by mid-May.
